This Page Blank (uspto)

Pending databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions .rnpm and .rnpn

Searches run against the Amino Acid Pending database produce two sets of results, with the extensions .rapm and .rapn

Because they contain data that is confidential, the results of Pending database searches should not be left in the case.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Diagnosing, observing re
This invention relates to a novel method for diagnosing schizophrenia determining susceptibility to schizophrenia in a human. The method comprises obtaining from a patient a DNA sample and detecting variation the regulator of G-protein signalling 4 (RGS4) gene. Alternatively,
                                                                                              WPI;

```

```
the method involves measuring RGS4 mRNA or protein levels in a tissue sample from the patient and determining if there is a reduced level. The method of the invention is useful for diagnosing and determining susceptibility to schizophrenia. The invention also comprises a method that is useful for treating schizophrenia which includes a prophylactic treatment. The method of genotyping polymorphic variants in the RGS-4 gene is applied to diagnosing pathologies of the schizophrenic spectrum, such as in particular schizotypy, schizoid individuals, etc. This method offers the possibility of diagnosing schizophrenia by a biological test and no longer exclusively by clinical evaluations. The present sequence represents the genomic DNA encoding the human regulator of G-protein signalling 4 (RGS4) protein used in the method of the invention. The gene for the RGS4 protein is located on human chromosome 1q21-22

                                                                                                                                                                                                                                                                                                                                                          The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic polypeptides are also useful for isolating compounds with cytostatic

                                                                                                                                                                                                                                                                                  В
                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a combination comprising several cDNAs that are cdifferentially expressed in activated vascular tissue. The invention also collisions a high throughput method for detecting differentially expressed cDNAs in a sample. The cDNAs of the invention may have considered the collision of the invention may have considered the collision of the invention may be used in gene therapy. The cDNAs of the invention may be used in a high-cc throughput methods for detecting differential expression of one or more collision as a sample, or screening several molecules or compounds to identify a molecules or compound that specifically binds a cDNA of the cDNAs in a sample, or screening several molecules or compounds to identify a ligand that specifically binds to the protein. A protein encoded by the cDNA may be used to screen several concludes or compounds to identify a ligand that specifically binds to be used to detect a produce or purify an antibody to the protein that can concentrate the protein from a sample. The nucleotides may be useful for combinant protein from a sample. The nucleotides may be useful for disease, hypertension, diabetes, pre-eclampsia, ischaemia reperfusion concludes, hypertension, diabetes, pre-eclampsia, ischaemia reperfusion concludes. Antibodies to the proteins encoded by the cDNAs are useful for disgnosing pre-pathologic disorders, and chronic or acute disease useful for concludes. Antibodies to the proteins encoded by the cDNAs are useful for consisted with abnormalities in the expression, amount or distribution concludes to the proteins encoded by the cDNAs are useful for consisted with abnormalities in the expression, amount or distribution concludes to differentially expressed in activated vascular tissue. Note: The concludes to disconders, and chronic or acute disease. Note: The concludes to disconders and concludes to the invention concludes to disconders and concludes to disconders. The concludes to the protein concludes to the protein concludes to the protein concludes

                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated cDNA expressed during adipocyte cd differentiation. The cDNA is useful for treating a subject with a cd disorder such as obesity, type II diabetes, lipodystrophy or hyperinsulinaemia. The nucleic acid is useful for a high throughput comethod of using a cDNA to screen several molecules or compounds to cidentify a ligand which specifically binds the cDNA which involves combining the nucleic acid with several molecules or compounds under conditions to allow specific binding, and detecting specific binding conditions to allow specific binding, and detecting specific binding conditions to allow specific binding, and detecting specific binding conditions to allow specific binding. And detecting specific binding conditions to allow specific binding conditions to allow specific binding conditions. The several molecules or compounds are chosen from DNA molecules, RNA molecules, peptide nucleic acid molecules, mimetics, peptides, transcription factors, respressors and cregulatory proteins. The present sequence represents a human cDNA conserved adipocyte differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

                                                                                                                                                                                                                                                                                                                                                                           The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI;

                                                                                          Ś
                                                                                                                           밁
                                                                                                                                                                                                                                                                                  activity, and can be used in gene therapy and vaccine production. (I) composed the proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) complete acids into a host cell and culturing the excreted (I), by inserting the mucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, and cancer metastases of haematopoietic-derived cells. AAK64703 conners and cancer metastases of haematopoietic-derived cells. AAK64703 conners from the present inwenthaematopoietic antigen genomic concers from the present invention. AAK54942 to AAK54950 and AAM82169 corpresent sequences used in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        В
                                  This sequence represents a single nucleotide polymorphism (SNP) of the chuman neuregulin-1 associated gene 1 (NRG1AG1) of the invention. The CC invention also relates to frequents or variants of the gene and the CC invention also relates to frequents or variants of the gene and the CC NRG1AG1 polypeptides they encode. The NRG1AG1 expression for example, they may be used to treat disorders associated with inappropriate NRG1AG1 expression. For example, they may be used to treat disorders associated with decreased expression to prectifying mutations or deletions in a patient's genome that affect the activity of NRG1AG1 by expressing inactive proteins or to supplement the patients own production of NRG1AG1 and inactive proteins or to supplement could be used as DNA probes and primers in diagnostic assays to detect and countritate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The CC antibodies may also be used as antigens in the production of NRG1AG1 expression and activity. Anti-NRG1AG1 antibodies and antagonists CC may also be used as diagnostic assays to identify modulators of Schizophrenia which may be prevented, diagnosted and/or treated by the coll cantibodies may also be used as antigens in the production of Schizophrenia which may be prevented, diagnosed and/or treated by the presence of NRG1AG1 polypeptides in samples. NRG1AG1 Is associated with about the production of th

This sequence represents a single nuclectide polymorphism (SNP) from the human neuregulin 1 gene of the invention. The invention also relates to fragments or variants of the neuregulin 1 gene. The gene and its proteins may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate neuregulin 1 expression, such as schizophrenia. For example they may be used to treat disorders associated with decreased neuregulin 1 expression by rectifying mutations or deletions in a patient's genome that affect the activity of neuregulin 1
                                                                                                                                                                                                                                                                              Neuregulin 1 nucleic acids and treating schizophrenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        28-FEB-2001;

Additionally, the gene may be used to produce the neuregulin 1 protein, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The gene and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The protein may also be used as antigens in the production of neuregulin 1 expression and activity. The antibodies and antagonists may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of neuregulin 1 in samples

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to the human neuregulin 1 gene (NRG1), single nucleotide polymorphisms within which were identified as being associated with an increased susceptibility to schizophrenia, which is located on chromosome 8p12. Also found within the same sequence is the neuregulin-1-associated gene 1 (NRG1AG1). The gene is useful for treating schizophrenia in an individual, for diagnosing susceptibility to schizophrenia, and for screening for agents useful in the treatment of the disease. The present sequence is a fragment of the NRG1AG1 gene of the invention containing a polymorphic site

Also found within the same sequence is the neuregulin 1 gene (NRG1). The gene is useful for treating schizophrenia in an individual, for diagnosing susceptibility to schizophrenia, and for screening for agents useful in the treatment of the disease. The present sequence is a fragment of the NRG1AG1 gene of the disease. The present sequence is a fragment of the NRG1AG1 gene of the disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NRG1AG1, useful for treating or diagnosing susceptibility to schizophrenia, or for assaying a sample for the presence of NRG1AG1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Stefansson H,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to primers for synthesising full length cDNA closes. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is the nucleotide sequence of the 5'-end of a cDNA provided in the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 847 BP; 272 A; 143 C; 199 G; 229 T; 0 U; 4 Other;

Patent No. 6630334

Patent No. 6630334

Patent INFORMATION:
GENERAL INFORMATION:
APPLICANT: GUEGLER, Karl et al
APPLICANT: GUEGLER, Karl et al
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, AND USES
TITLE OF INVENTION: THEREOF
TITLE REPERENCE: CLO01067
CURRENT APPLICATION NUMBER: US/09/751,389
CURRENT FILING DATE: 2001-01-02
NUMBER OF SEQ ID NOS: 8
SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 3
LENGTH: 786431
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           a

                                                                              US-09-435-739-42
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1, Application US/09601777
Patent No. 6461848
GENERAL INFORMATION:
APPLICANT: Nakajima, Motowo
APPLICANT: Funakubo, Minako
TITLE OF INVENTION: Human heparanase polypeptide and cDNA
FILE REFERENCE: 30384A
CURRENT FILING DATE: 2000-08-07
NUMBER OF SEQ ID NOS: 2
SOFTWARE: Patentin Ver. 2.1
                                                                                                                                                                   GENERAL INFORMATION:
APPLICANT: Pecker, Iris
APPLICANT: Vlodavsky, Israel
APPLICANT: Viodavsky, Israel
APPLICANT: Feinstein, Elena
TITLE OF INVENTION: EXPENSION OF SAME IN GENETICALLY MODIFIED CELLS
FILE REFERENCE: 00/20454
CURRENT FILING DATE: 2001-06-05
NUMBER OF SEQ ID NOS: 47
SOFTWARE: Patentin version 3.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       44450
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 44331
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 3, Application US/09751389

Patent No. 6630334

GENERAL INFORMATION:

APPLICANT: GUEGLER, Karl et al

APPLICANT: GUEGLER, Karl et al

TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC

TITLE OF INVENTION: THEREOF

FILE REFERENCE: CL001067

CURRENT APPLICATION NUMBER: US/09/751,389

CURRENT FILING DATE: 2001-01-02

NUMBER OF SEQ ID NOS: 8

SOFUMARE: FastSEQ for Windows Version 4.0

SEQ ID NO 3

LENGTH: 786431
                                                                                                                                               Sequence 1, Application US/09426290
Patent No. 6410712
GENERAL INFORMATION:
APPLICANT: Berglind Ran Olafsdottir
APPLICANT: Useffrey Gulcher
TITLE OF INVENTION: HUMAN NARCOLEPSY GENE
